## Specifications & Information

### YARDSTEEL WEATHERING STEEL

YardSteel™ Weathering Steel Edging is a premium snap-together system for clean, natural garden borders. Made from genuine weathering steel, it develops a rich protective patina over time while staying strong, flexible, and easy to install.

Designed for Australian conditions, it bends smoothly for curves and corners and locks together without screws, pins, or special tools - delivering a timeless, low-maintenance finish that improves with age.

### SPECIFICATIONS

Edging Height	100mm	150mm
Material	Corten-Type, SPA-H	Corten-Type, SPA-H
Length	1075mm	1075mm
Stake Height	95mm	105mm
Gauge	1.5mm	1.5mm
Weight	1.45kg	1.95kg

### PERFECT FOR

Garden beds, feature borders, and landscape designs where a natural, weathered look and low maintenance are key.

### BENEFITS OF YARDSTEEL WEATHERING STEEL

Genuine Weathering Steel with built-in stakes and quick-join connections for an easy, tool-less DIY installation.

-  **Effortless Installation**  
Snap, bend, and lock into place - no extra pins, pegs, or tools needed. Installation is fast, clean, and frustration-free.
-  **Completely Flexible**  
Form curves, corners, or straight lines to perfectly match any garden layout. Fully adaptable to your landscaping vision.
-  **Built For Aussies**  
Made from high-quality, weather-resistant steel that won't warp, crack, or corrode - a lifetime of clean edges with zero maintenance.
-  **Rock-Solid Stability**  
Engineered with deep, integrated spikes to anchor firmly into the ground, keeping edges straight, secure, and professional-looking.

## Specifications & Information

### WEATHERING STEEL EDGING SIZES

#### 100mm Edging

100mm weathering steel edging is a popular choice for standard garden borders and lawn separation. It provides a clean, defined edge that keeps grass, mulch and soil neatly contained while still maintaining a low, subtle profile in the landscape.

The 100mm height offers a great balance between strength and flexibility, making it suitable for both straight runs and gentle curves. Made from durable weathering steel, it develops a natural rusted finish that blends beautifully into garden and outdoor spaces.

#### 150mm Edging

150mm weathering steel edging is ideal for areas that require deeper separation between surfaces such as lawns, garden beds and pathways. The extra height helps retain soil and mulch more effectively while creating a strong visual border.

This size is commonly used in landscaped gardens where raised beds or sloped areas need additional support. Like all YardSteel corten edging, it forms a stable, long-lasting edge and develops a distinctive natural patina over time.

### Where YardSteel Works Best

YardSteel™ Weathering steel edging (corten-type) is designed to bring order and definition to outdoor spaces of all sizes. From crisp lawn edges to flowing garden beds, it's built to handle real Australian gardens, not just showroom installs. Common uses include: Lawn and turf borders, garden beds, pathways, paving edges, driveways, curves, circles, and custom landscape designs. Whether you're tackling a weekend DIY project or a full landscape build, YardSteel adapts easily to your layout.

### Designed for Easy Installation

YardSteel is made to be installed without stress, specialist tools, or trade experience. Each section features integrated ground stakes and a snap-together joining system that locks pieces securely in place. Start by setting your layout, push the edging into the soil, and connect additional sections as you go. Curves and corners can be formed by gently bending the steel to suit your design. A rubber mallet or timber block can be used to seat the edging evenly for a clean, professional result.

### Built for Australian Conditions

Australian gardens demand materials that can handle heat, moisture & changing ground conditions. YardSteel edging is manufactured from high-quality steel designed to stay strong & stable outdoors. Weathering steel naturally develops a protective weathered surface over time. Engineered for long-term performance with minimal maintenance.

### Handling, Storage & On-Site Care

Store YardSteel edging on a flat surface in a dry area until ready to install. When handling steel sections, take care as edges may be sharp. We recommend moving cartons one at a time and using appropriate lifting aids where needed. Safe handling helps prevent product damage & reduces the risk of injury during installation.

### Safety Notes

Basic safety precautions should always be followed when installing steel garden edging. Wear gloves and sturdy footwear and use eye and hearing protection if cutting or using powered tools. For commercial or trade installations, ensure all work complies with relevant Australian workplace health and safety requirements.

### Long-Term Stability You Can Trust

Once installed, YardSteel edging anchors firmly into the ground, helping maintain straight lines and smooth curves over time. Integrated spikes and secure joins reduce movement, even as soil settles or garden beds change. The result is a strong, clean edge that keeps lawns, paths, and garden beds looking sharp year after year.
